

# RESIDENTIAL & TAIL GATING FLAG POLES (T)

## MULTI-USE TELESCOPING FLAGPOLE

The Multi-Use Telescoping flagpole is like no other flagpole we've ever previously offered. The first word that comes to mind with this pole is versatile.

The four sections of this pole extend out and snap-lock at 19'. The bottom diameter of the pole is 2" while the top section is 1 3/8". If you wanted the pole to be a bit shorter, then just use the built-in twist locks to adjust the pole from anywhere between 7' and 19'. Use this flagpole with the supplied 14" PVC ground sleeve for traditional installation or pull out the included trusty Tire Mount and drop the pole into the sleeve. It's that easy!

In order to fly your flag, just use the spring clip located at the top section of the pole and then attach the counter weight to the bottom grommet hole. That's it! The pole is constructed to fly one flag only or if you wanted to display a free-flowing banner, just take off the 3" gold aluminum ball and then add the 48" aluminum rotating arm. Slide your banner over the arm and you have an instant advertising medium.

This pole is perfect for residential display, tailgating at your favorite events, county or state fairs, sidewalk advertising, or car lots. There are many uses for this pole. When you are done with the pole, the sections slide into one another to allow for easy transportation. Replacement parts are available, inquire.

Shipping of the pole is through standard ground transportation and in two cartons at the oversize rate. Imported.

EXPOSED HEIGHT	ITEM #	FINISH	BUTT DIAM	TOP DIAM	FLAGGED WINDSPEED	SUGGESTED FLAG SIZE	Each	3
19'	648	Brushed	2"	1 3/8"	45	3' X 5'	\$ 110.00	\$ 105.00

## ADJUSTABLE FIBERGLASS POLE

The SuperPole™ is the latest addition to our flagpole line. Each pole could easily display the feather flags or even a standard 3' X 5' flag.

The pole will not rust and has virtually no maintenance. Each pole comes with its' own carrying bag for easy transport and only weighs 5lbs for the 15' pole and 7lbs for the 21' pole. Un-flagged, the wind rating on either pole is rated at 65 mph.

Each pole is composed of three sections: 1 1/4" bottom diameter, 1" middle diameter, and 3/4" top diameter. Each section is secured at the desired height with a unique locking system. Poles come with a set of flag attachments, installation instructions, and a 24" PVC ground sleeve. Additional accessories for indoor/outdoor display on Page 5.

While the 15' pole collapses down to 6' and the 21' pole collapses down to 8', both can still ship via standard carriers, but will have an oversized package surcharge.

STYLE	ITEM #	SIZE	EACH	6	12
15' White	SP-15-W	15'	\$ 70.00	\$ 66.50	\$ 63.00
